AegisImage — Forensic Analysis Report

Version 0.1.0 | Generated: 2026-10-25T02:52:46.777230+00:00 | Schema: 1.0

EDUCATIONAL NOTICE: *AegisImage is an educational digital image forensics aid. Findings are exploratory observations and do not constitute proof of authenticity or tampering.*

Evidence Identity

Original Filename	sample_03_tampered_spliced.jpg	**Detected Format**	JPEG
File Size	5,875 bytes (5.7 KB)	**Dimensions**	240 x 180 px
Color Mode	RGB	**Frame Count**	1
SHA-256 Digest	`f23de8347b3ca89eee103967908f526cdf1fc3454e6126b029cc5b6019600243`		
SHA-1 Digest	`19021756533a906af65b1d925b70755cb302dd30`	**MD5 Digest**	`6b3d35e82fbb8972ac06630451241b6a`

Metadata Inspection [Status: COMPLETED]

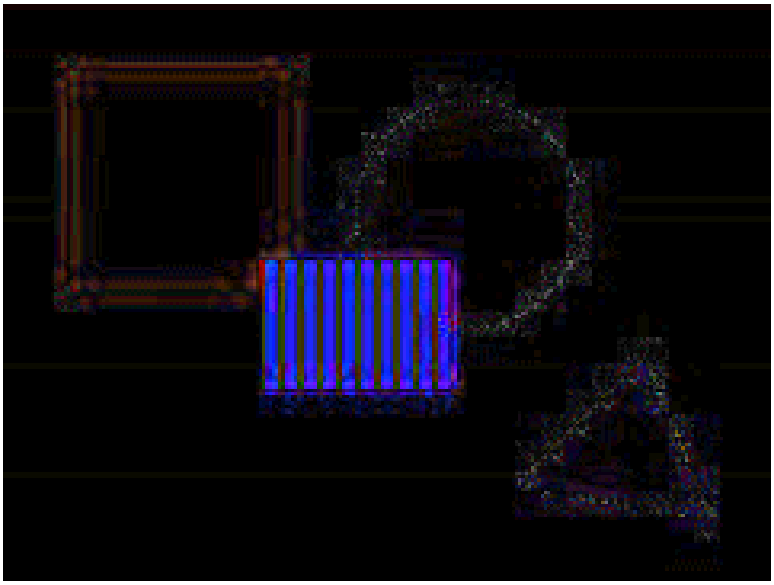

Observation: No EXIF metadata found. Many cameras, web services, and apps routinely strip metadata.

Limitations: Metadata may be absent, stripped, modified, or forged. The absence of metadata is not proof of tampering. | The absence of metadata is common across social media platforms and does not indicate tampering.

JPEG Error Level Analysis [Status: COMPLETED]

Observation: Error Level Analysis visualization generated with recompression quality 90 and amplification 10x.

Review Cue: ELA visualization highlights variations in compression error. Bright areas indicate higher differences between original and recompressed pixels; this naturally happens around contrast edges, fine textures, or spliced regions.

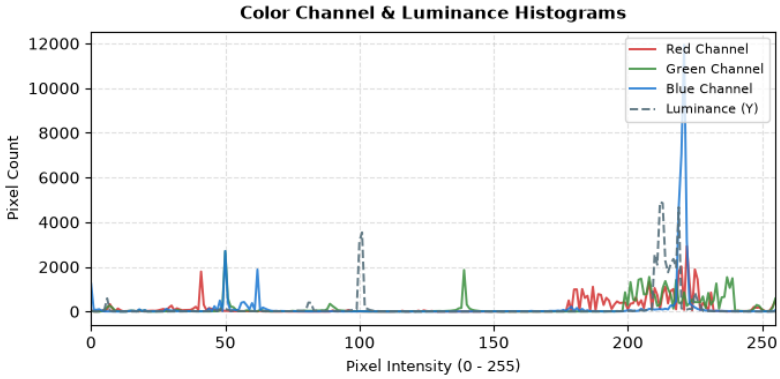

Derived Analysis Artifact — Not Original Evidence

Limitations: Error Level Analysis (ELA) is an exploratory visualization for JPEG images. Variations arise from compression history, high-frequency textures, and surface contrast. It does not provide a definitive tampering verdict. | ELA is an exploratory visualization and cannot provide a definitive authenticity or forgery verdict.

Image Statistics & Color Histograms [Status: COMPLETED]

Observation: Color channel distribution and descriptive statistics computed across 240x180 pixels (43,200 total).

Derived Analysis Artifact — Not Original Evidence

Limitations: Histograms describe pixel intensity distributions across color channels. | Histogram analysis is descriptive and cannot independently detect or prove image manipulation.
