AegisImage — Forensic Analysis Report

Version 0.1.0 | Generated: 2026-10-25T02:52:48.226543+00:00 | Schema: 1.0

EDUCATIONAL NOTICE: *AegisImage is an educational digital image forensics aid. Findings are exploratory observations and do not constitute proof of authenticity or tampering.*

Evidence Identity

Original Filename	sample_04_with_exif.jpg	**Detected Format**	JPEG
File Size	6,021 bytes (5.9 KB)	**Dimensions**	240 x 180 px
Color Mode	RGB	**Frame Count**	1
SHA-256 Digest	`43c6b2001fd26666d9c0db4796419fbe2a0f9b8d6d077a3ce6f187da7167219f`		
SHA-1 Digest	`daedbde9c73f8e9d2a5b932e7074029373d11b0a`	**MD5 Digest**	`7419391796a06487301468d5bfb9e9b1`

Metadata Inspection [Status: COMPLETED]

Observation: EXIF metadata present(AegisLabCam Model-ForensicsX) with 6 tag(s) extracted.

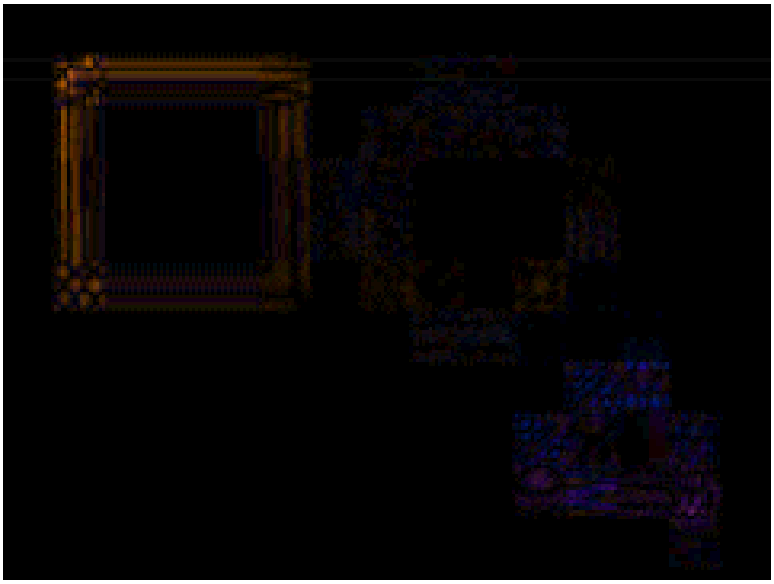

Review Cue: Software tag indicates an editor ('Adobe Photoshop 2024 (Windows)') was recorded. This is a review cue regarding processing history, not proof of forgery.

Limitations: Metadata may be absent, stripped, modified, or forged. The absence of metadata is not proof of tampering. | The absence of metadata is common across social media platforms and does not indicate tampering.

JPEG Error Level Analysis [Status: COMPLETED]

Observation: Error Level Analysis visualization generated with recompression quality 90 and amplification 10x.

Review Cue: ELA visualization highlights variations in compression error. Bright areas indicate higher differences between original and recompressed pixels; this naturally happens around contrast edges, fine textures, or spliced regions.

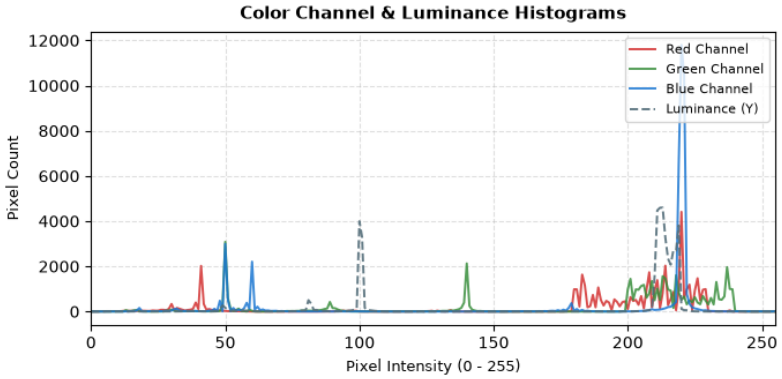

Derived Analysis Artifact — Not Original Evidence

Limitations: Error Level Analysis (ELA) is an exploratory visualization for JPEG images. Variations arise from compression history, high-frequency textures, and surface contrast. It does not provide a definitive tampering verdict. | ELA is an exploratory visualization and cannot provide a definitive authenticity or forgery verdict.

Image Statistics & Color Histograms [Status: COMPLETED]

Observation: Color channel distribution and descriptive statistics computed across 240x180 pixels (43,200 total).

Derived Analysis Artifact — Not Original Evidence

Limitations: Histograms describe pixel intensity distributions across color channels. | Histogram analysis is descriptive and cannot independently detect or prove image manipulation.
