AegisImage — Forensic Analysis Report

Version 0.1.0 | Generated: 2026-10-25T02:52:49.519927+00:00 | Schema: 1.0

EDUCATIONAL NOTICE: *AegisImage is an educational digital image forensics aid. Findings are exploratory observations and do not constitute proof of authenticity or tampering.*

Evidence Identity

Original Filename	sample_05_with_gps.jpg	**Detected Format**	JPEG
File Size	5,979 bytes (5.8 KB)	**Dimensions**	240 x 180 px
Color Mode	RGB	**Frame Count**	1
SHA-256 Digest	`f5e9763fdf74c1ca0c0ca78f700bb538710973893010c1a5510cc1b5a111a33e`		
SHA-1 Digest	`fe4e312d877cf16b800bd8a16a1db3a848425117`	**MD5 Digest**	`24cecae7037bf8d4f80ff4fbfef35304`

Metadata Inspection [Status: COMPLETED]

Observation: EXIF metadata present(AegisGeoCam None) with 4 tag(s) extracted.

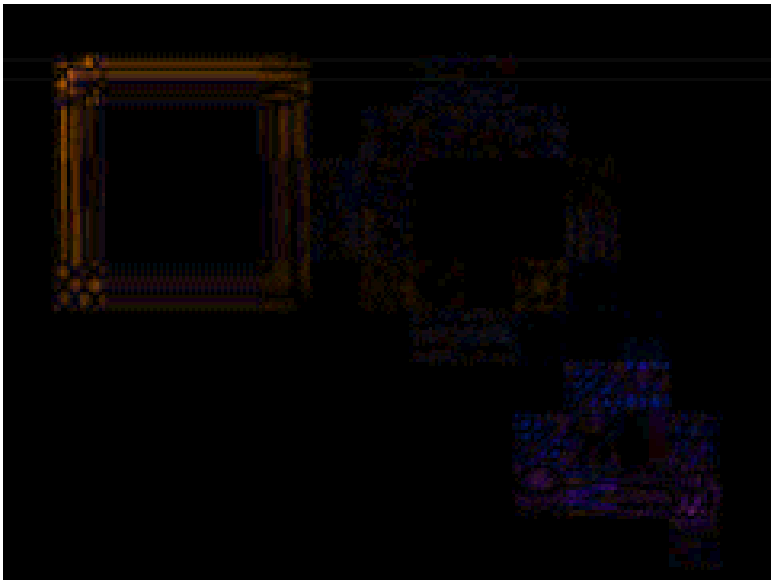

Review Cue: Geotagging metadata detected. Exact GPS coordinates have been suppressed to protect privacy.

Limitations: Metadata may be absent, stripped, modified, or forged. The absence of metadata is not proof of tampering. | The absence of metadata is common across social media platforms and does not indicate tampering.

JPEG Error Level Analysis [Status: COMPLETED]

Observation: Error Level Analysis visualization generated with recompression quality 90 and amplification 10x.

Review Cue: ELA visualization highlights variations in compression error. Bright areas indicate higher differences between original and recompressed pixels; this naturally happens around contrast edges, fine textures, or spliced regions.

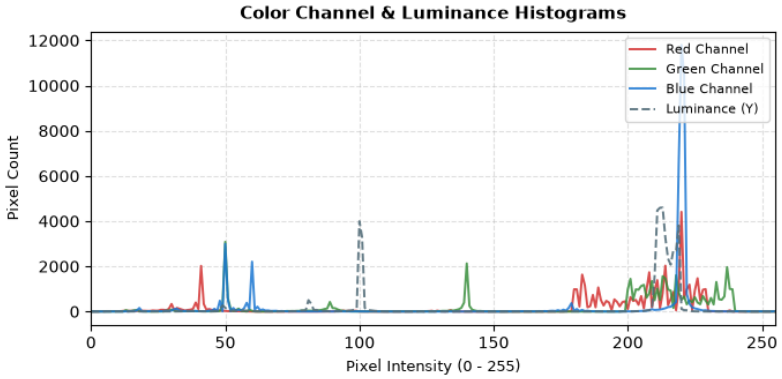

Derived Analysis Artifact — Not Original Evidence

Limitations: Error Level Analysis (ELA) is an exploratory visualization for JPEG images. Variations arise from compression history, high-frequency textures, and surface contrast. It does not provide a definitive tampering verdict. | ELA is an exploratory visualization and cannot provide a definitive authenticity or forgery verdict.

Image Statistics & Color Histograms [Status: COMPLETED]

Observation: Color channel distribution and descriptive statistics computed across 240x180 pixels (43,200 total).

Derived Analysis Artifact — Not Original Evidence

Limitations: Histograms describe pixel intensity distributions across color channels. | Histogram analysis is descriptive and cannot independently detect or prove image manipulation.
