AegisImage — Forensic Analysis Report

Version 0.1.0 | Generated: 2026-10-25T02:52:51.910179+00:00 | Schema: 1.0

EDUCATIONAL NOTICE: *AegisImage is an educational digital image forensics aid. Findings are exploratory observations and do not constitute proof of authenticity or tampering.*

Evidence Identity

Original Filename	sample_07_clean.png	**Detected Format**	PNG
File Size	1,984 bytes (1.9 KB)	**Dimensions**	240 x 180 px
Color Mode	RGB	**Frame Count**	1
SHA-256 Digest	`5ae2788e93ddcfff616ca689fc8415b0646d4a4ea1893957ec05b7a9607077f4`		
SHA-1 Digest	`90f5cfaf10ffccf15c798a862e1306004170d2fb`	**MD5 Digest**	`05f87d7f780ae0db2bc59e96efed797e`

Metadata Inspection [Status: COMPLETED]

Observation: No EXIF metadata found. Many cameras, web services, and apps routinely strip metadata.

Limitations: Metadata may be absent, stripped, modified, or forged. The absence of metadata is not proof of tampering. | The absence of metadata is common across social media platforms and does not indicate tampering.

JPEG Error Level Analysis [Status: NOT_APPLICABLE]

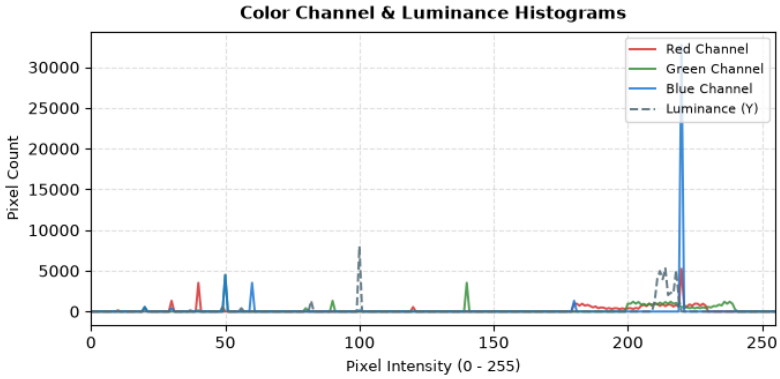
Observation: Error Level Analysis is only applicable to JPEG images. Input format 'PNG' does not use lossy discrete cosine transform compression.

Review Cue: ELA skipped: Format 'PNG' is not eligible for JPEG recompression analysis.

Limitations: Error Level Analysis (ELA) is an exploratory visualization for JPEG images. Variations arise from compression history, high-frequency textures, and surface contrast. It does not provide a definitive tampering verdict. | ELA is an exploratory visualization and cannot provide a definitive authenticity or forgery verdict.

Image Statistics & Color Histograms [Status: COMPLETED]

Observation: Color channel distribution and descriptive statistics computed across 240x180 pixels (43,200 total).



Derived Analysis Artifact — Not Original Evidence

Limitations: Histograms describe pixel intensity distributions across color channels. | Histogram analysis is descriptive and cannot independently detect or prove image manipulation.
